DF1101-Ex

Sinteso™ Cerberus™ PRO

Infrared flame detector

 ϵ

AlgoRex Synova™

Collective/SynoLINE 600 for explosion-hazard areas of zones 1 and 2

- For inside and outside applications
- Triple-sensor evaluation
 - Detection in various wavelengths
 - Microprocessor-controlled signal evaluation
- Selective evaluation of flicker frequency
- Selectable application algorithms
- Excellent immunity to false alarms thanks to a combination of patented fuzzy logic and Wavelet analysis
- Highest resistance to
 - electromagnetic influence
 - sunlight and heat radiation
 - humidity and corrosion
- Connection to the detection line via the DC1192 input/output module
 - for galvanic isolation and connection to the collective/SynoLINE 600, interactive or AnalogPLUS/SynoLOOP fire detection systems
- Connection to the detection line via the transponder FDCIO223
 - for galvanic isolation and connection to the addressable FDnet/C-NET fire detection system

Environmental

- ecologically processing
- recyclable materials
- electronic and synthetic material simple separable

Characteristics

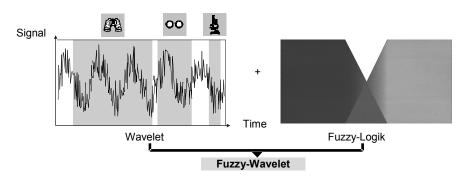

- the detector housing made of aluminum also serves as a screen against electromagnetic interference (EMB)
- the base housing consists of a robust, glass-fiber reinforced synthetic material
- protected electronics
- built-in alarm indicator (AI)
- collective signal processing

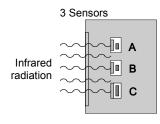

• Explosion protection category

The infrared flame detector DF1101-Ex is designed to the explosion protection category 'Intrinsic safety' Ex i. The standards which cover this are EN50014 (IEC60079-0) und EN50020 (IEC60079-11)

Function

- Patented signal evaluation

The detection elements of the infrared flame detector consist of two pyroelectric sensors and a silicon photo diode.

Sensor A:

The pyroelectric sensor A reacts to infrared flame gas in the characteristic CO2 spectral range between $4.0...4.8~\mu m$.

Sensor B:

The pyroelectric B measures the infrared radiation of sources of interference in the range between 5.1... 6 μm

Sensor C:

The silicon photo diode measures the solar radiation in the range between 0.7...1.1 μm

- One sensor measures the hot carbon dioxide in a specific flame wavelength; the two other sensors simultaneously measure the interference radiation in other wavelengths.
- With intelligent signal processing through fuzzy algorithms and wavelet analysis, the DF1101-Ex achieves excellent detection reliability while maintaining the highest immunity to interference radiation and sunlight.
- In order to safeguard against a possible decision emergency, the detector contains an additional emergency activation channel.

Application

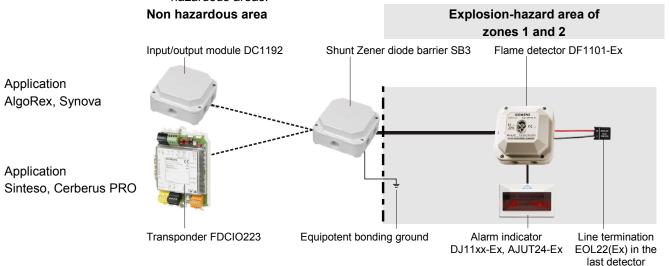

- Chemicals production plants, chemicals stores
- Oil refineries
- petrol storage and pump stations
- Natural gas transfer points
- Propane and butane filling installations

 All explosion-hazard areas in which flaming fires involving carbonaceous materials are to be expected

Installation in explosion-hazard areas

Equipment installed in explosion-hazard areas must always comply with local national regulations.

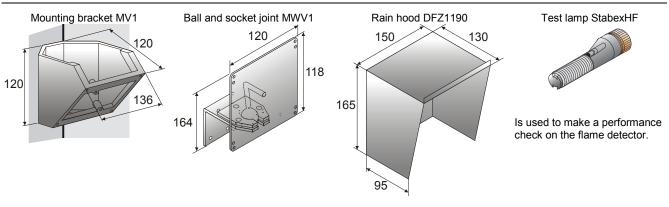

The DC1192/FDCIO223 input/output module and the series-connected SB3 shunt Zener diode barrier are used as a galvanic isolation between explosion-hazard and non hazardous areas.

Further details can be found in the documents

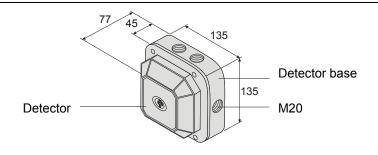

- Fire protection in explosion-hazard areas, document no. 1204
- Input/output module DC1192, document no. 001571
- Transponder FDCIO223, document no. 009168
- Shunt Zener diode barrier SB3, document no. 001222

Accessories

Design

- easy installation of the housing on stable, vibration-free surfaces; the detector is only inserted after installation check, shortly before commissioning
- 6 threads M20 for screwed cable glands
- connection via two-wire installation with the control unit
- ext. alarm indicator connectable
- pluggable connection between flame detector and base
- mounting bracket MV1 for room surveillance to fix the detector at the right inclination angle
- ball and socket joint MWV1 for the orientation to an object
- rain hood DFZ1190 for outside applications

 By using the DC1192 input/output module and
SB3 shunt Zener diode barrier it is compatible
with fire detection system control units with col-
lective/SynoLINE600, interactive or
AnalogPLUS/SynoLOOP signal evaluation.
 By using the FDCIO223 transponder and SB3
shunt Zener diode barrier it is compatible with
fire detection system control units with
FDnet/C-NET signal evaluation.
