

## TEMPERATURE SENSOR TEP NTC 10-KB

TEP NTC 10-KB temperature sensor is designed for automatic HVAC systems to detect radiator temperatures.

Temperature is detected by a NTC sensor element with a nominal resistance of 5025  $\Omega$  at 25 °C.

Housing is made of heat-resistant plastic. The cover and the terminal blocks are tilted 45° to provide easy installation. Sensor is mounted on the pipe by using a hose clamp.
